

# SECURE WORKPLACE LOCKERS

Extending HID™ access control security for workplace lockers

# HID TECHNOLOGY™

**HID™ security access control solutions have long been the ideal choice to fully control and manage access for commercial, government and a range of organisations employing high numbers of personnel.**

METRA combined with Genuine HID Technology™ enables organisations to leverage existing access control ID credentials of their employees. The credentials can also be extended with an electronic workplace lockers solution.

Organisations, that already have HID™ access control in place can easily extend the same security levels to all workplace lockers. Whether used for visitors, employees, departments, projects (multiple employees with access to the same locker) or for other purposes.

Each employee can use the same HID™ access control media with personalised ID credential to unlock and access personal or other workplace lockers - either with an Access Control RFID smart card, the HID Mobile Access™ app or a combination of both.

Our innovative solution simultaneously supports low-frequency and high-frequency credentials, including iCLASS® Seos®, HID Prox®, iCLASS SE®, MIFARE® Classic and MIFARE DESFire® EV1 and NFC and Bluetooth™ for HID Mobile Access app.

- Extend HID™ access security to your workplace lockers.
- Use the same iCLASS™ smart cards or HID Mobile Access™ App for your workplace lockers.
- Combine different locking options on the same locker bank:
  - Visitor (PIN code, short-term lockers)
  - Employee (HID™ card/app, agile or assigned locker)
  - Department / Project (multiple HID™ cards/apps, same locker).
