

RFID solutions

Seamlessly automate access to buildings, facilities and secure storage lockers

RFID technology has reshaped convenience with faster, automated processes, instant application data and analytics.

Radio-frequency identification (RFID) uses electromagnetic fields to automatically identify and track tags that contain electronically stored information. RFID chips can be incorporated in wristbands, keytags, fobs, paper passes and plastic cards. Each unique RFID tag can allow timely access through doors and turnstiles and unlocking/locking of secure storage lockers.

BOOST YOUR BRAND WITH CUSTOMISED DESIGNS FOR KEYTAGS, WRISTBANDS AND SMARTCARDS.

TURNSTILE READER

CENTRAL READER

DOOR READER
