

# Electronic Locking Solution

## KEYPAD OPTION

**Would you like to swim and sunbathe carefree on the beach? Are you worried that someone might still your personal belongings while you are trying to cool in the water? Trust us and securely lock your personal belongings in lockers. We have developed a solution – an electronic locking system for lockers with PIN code.**

---

Electronic locker renting

---

PIN code as a locker key

---

Alarm in case of break-in

---

## • System description

The swimmer (user) can rent the locker for a minimal cost and for a certain time. The time and rent restrictions can be determined in device's operating parameters. The process of acquisition, renting and locking of the locker are carried out on the user interface, where the user inserts the coins into the coin acceptor, enters the number of chosen locker (free lockers are open) and types in 4 digit PIN code.

After completing the hiring procedure the user has 1 minute or as set in operating parameters to go to the chosen locker, put their belongings inside and close the locker door. In the event that the user has already completed the locking procedure, but did not manage to close the locker door in time, they need to repeat the hiring procedure with the same locker number and the same PIN code, but this time without payment.

By entering a locker number and a PIN code user unlocks the locker that he have hired.

In the time frame for which user hired the locker he can unlock and lock it as many times as we wish, by using the same PIN code that he have used when he hired the locker. After 24 hours expire (or as set in operating parameters) user needs to pay to unlock the locker.

All the system needs to operate is access to electricity. The parameters of the system (renting time, master and setup codes) are inserted through the user interface into the locker controller. Thus gives you the possibility to change the renting time or other parameters. The system also ensures safety, in case of brake-in the alarm goes on.

## • System Components

Electronic Lock (Code: MTLKEG)

Locker Controller (Code: LC16AEKP)

Display Keypad (Code: DSKP)

EURO Coin acceptor (Code: CAEU2)
